Index to Volume 189

Acetyl-Ala-Pro-Ala, structure of the product complex with porcine pancreatic elastase at 1·65 Å resolution, 533
Acetylcholine receptor-enriched membranes, location of terbium binding sites, 673
Addison, C. F. (see also Davies, J. A.), 13
Adenovirus type 12 DNA, N^6-methyldeoxyadenosine residues at specific sites decrease the activity of the E1A promoter, 371
Allosteric interactions of *Escherichia coli* aspartate transcarbamylase using single amino acid substitution mutants, involvement of tryptophan 209, 227
Alzari, P. (see also Joliff, G.), 249
Alzari, P. M. (see also Guillon, V.), 723
Amicyanin from *Paracoccus denitrificans*, preliminary X-ray crystallographic study, 257
α-Amylase inhibitor Hoe-467A, crystal structure determination, refinement and molecular model, 383
α-Amylase inhibitor Tendamistat, studies by ^{1}H n.m.r. and distance geometry of the solution conformation, 377
Antibody molecules, location of antigenic epitopes, 715
Antibody, monoclonal, directed against a cobra cardiotoxin, preliminary crystallographic study of the Fab fragment, 723
Antifreeze polypeptide, winter flounder, single crystals, 725
Antigenic epitopes, location on antibody molecules, 715
Anti-*Z*-DNA antibodies, interaction with left-handed *Z*-DNA, chemical footprinting by diethylpyrocarbonate carbethoxylation, 487
Aspartate transcarbamylase, *Escherichia coli*, allosteric interactions using single amino acid substitution mutants, involvement of tryptophan 209, 227
Asselbergs, F. A. M., Will, H., Wingfield, P. & Hirschi, M., A recombinant Chinese hamster ovary cell line containing a 300-fold amplified tetramer of the hepatitis B genome together with a double selection marker expresses high levels of viral protein, 401
Assembly mechanism, chromatin, in *Xenopus* oocytes, 457
Assembly of the TonA polypeptide into the outer membrane of *Escherichia coli* K12, 477
Aubert, J.-P. (see also Joliff, G.), 249
Aumailley, M. (see also Laurie, G. W.), 205
Autorepression of mini-F E protein: the carboxy-terminal end is essential for *E* gene repression and mini-F copy number control, 293

Bacteria, enteric, terrestrial and marine, and conservation of Chi cutting activity, 585
Bacteriophage λp_L operon, transcription termination and processing sites, 131
Bacteriophage Mu ends, analysis using site-directed mutagenesis, 597
Bacteriophage ϕX174, insertions of palindromic DNA sequences into the J–F intercistronic region interfere with normal phage growth, 285
Bacteriophage T4 DNA polymerase mutator mutants; isolation, 261
Bacteriophage T4 gene *69* product, a new membrane-associated DNA replication protein, shares a patch of homology with the *Escherichia coli dnaA* protein, 243
Bacteriophage T7 RNA polymerase, use to direct selective high-level expression of cloned genes, 113
Base modifications, post-transcriptional, effects on the site-specific function of tRNA in eukaryote translation, 663
Basement membrane (type IV) collagen, localization of binding sites for laminin, heparan sulfate proteoglycan and fibronectin, 205
Bauer, W. R. (see also White, J. H.), 329
Beer, M. (see also Knight, P. J.), 167
Béguin, P. (see also Joliff, G.), 249
Berriman, J. (see also Manstein, D. J.), 701
Bex, F., Piérard, P., Desmyter, A., Drèze, P., Colet, M. & Couturier, M., Mini-F E protein: the carboxy-terminal end is essential for *E* gene repression and mini-F copy number control, 293
Binding site localization for laminin, heparan sulfate proteoglycan and fibronectin on basement membrane (type IV) collagen, 205
Bing, J. T. (see also Laurie, G. W.), 205
Bosch, D., Leunissen, J., Verbakel, J., de Jong, M., van Erp, H. & Tommassen, J., Periplasmic accumulation of truncated forms of outer-membrane PhoE protein of *Escherichia coli* K-12, 449
Bovine pancreatic procarboxypeptidase A-S6 ternary complex, crystallization and preliminary X-ray study of subunit III, 709
Braun, W. (see also Kline, A. D.), 377
Brayer, G. D. (see also McPherson, A.), 305
Breitling, F. & Little, M., Carboxy-terminal regions on the surface of tubulin and microtubules. Epitope locations of YOL1/34, DM1A and DM1B, 367
Brunel, C. (see also Lelay-Taha, M.-N.), 519

C1 subcomponent of human complement, functional model, 573
Cambillau, C., Kerfelec, B., Foglizzo, E. & Chapus, C., Crystallization and preliminary X-ray study of subunit III of the bovine pancreatic procarboxypeptidase A-S6 ternary complex, 709
Carboxy-terminal regions on the surface of tubulin and microtubules. Epitope locations of YOL1/34, DM1A and DM1B, 367
Cardiotoxin, cobra, preliminary crystallographic study of the Fab fragment of a monoclonal antibody, 723
Caron, F. (see also Prat, A.), 47
Carver, J. P. (see also Rini, J. M.), 259
Cech, T. R. (see also Inoue, T.), 143
Chapus, C. (see also Cambillau, C.), 709
Charbas, P. (see also Petratos, K.), 727
Chen, P. (see also Yang, D. S. C.), 725
Cherbas, L., Schulz, R. A., Koehler, M. M. D., Savakis, C. & Cherbas, P., Structure of the *Eip28/29* gene, an ecdysone-inducible gene from *Drosophila*, 617
Cherbas, P. (see also Cherbas, L.), 617
Chi cutting activity conservation in terrestrial and marine enteric bacteria, 585
Chicken erythroid cells at different stages of differentiation, fine analysis of the active H5 gene chromatin, 217
Chinali, G. (see also Robertson, J. M.), 653
Chinese hamster ovary cell line, recombinant, containing a 300-fold amplified tetramer of the hepatitis B genome together with a double selection marker expresses high levels of viral protein, 401
Chloramphenicol acetyl transferase prokaryotic gene, expression in *Drosophila* under the control of larval serum protein 1 gene promoters, 13
Chromatin, active H5 gene, of chicken erythroid cells at different stages of differentiation, fine structure analysis, 217
Chromatin assembly mechanism in *Xenopus* oocytes, 457
Chung, Y. J. (see also Yang, D. S. C.), 725
Circles, DNA, a Monte Carlo study; topological distributions and torsional rigidity of DNA, 73
Clostridium thermocellum, crystallization and preliminary X-ray diffraction study of an endoglucanase, 249
Cobra cardiotoxin, preliminary crystallographic study of the Fab fragment of a monoclonal antibody, 723
Cole, G. M. (see also Meyer, E. F. Jr), 533
ColE1-type plasmids, concatemer formation in mutants of *Escherichia coli* lacking RNase H activity, 389
Colet, M. (see also Bex, F.), 293
Collagen (type IV), basement membrane, localization of binding sites for laminin, heparan sulfate proteoglycan and fibronectin, 205
Concatemer formation of ColE1-type plasmids in mutants of *Escherichia coli* lacking RNase H activity, 389
Conformation, solution, of the α-amylase inhibitor Tendamistat, studies by ^{1}H n.m.r. and distance geometry, 377

Co-operativity value of DNA–RecA protein interaction. Influence of the protein quaternary structure on the binding analysis, 711
Copy number control, mini-F E protein, the carboxy-terminal end is essential, 293
CORDONE, L., CUPANE, A. & VITRANO, E., Effects of organic co-solvents on the oxygen equilibrium of *N*-ethylmaleimide-treated human haemoglobin, 353
CORDONE, L. (see also CUPANE, A.), 343
Co-solvents, organic, effect on the dimer/tetramer equilibrium of human haemoglobin, 343
Co-solvents, organic, effects on the oxygen equilibrium of *N*-ethylmaleimide-treated human haemoglobin, 353
COURT, D. L. (see also NAKAMURA, Y.), 103
COUTURIER, M. (see also BEX, F.), 293
CROTHERS, D. M. (see also LEVENE, S. D.), 61, 73
Crystal structure determination, refinement and the molecular model of the α-amylase inhibitor Hoe-467A, 383
Crystal structure of RNase A complexed with $d(pA)_4$, 305
γ-Crystallin gene family, rat, concerted and divergent evolution, 37
Crystallization and preliminary X-ray diffraction studies of a pea lectin–methyl 3,6-di-O-(α-D-mannopyranosyl)-α-D-mannopyranoside complex, 259
Crystallization and preliminary X-ray diffraction study of an endoglucanase from *Clostridium thermocellum*, 249
Crystallization and preliminary X-ray study of subunit III of the bovine pancreatic procarboxypeptidase A-S6 ternary complex, 709
Crystallographic study, preliminary, of the Fab fragment of a monoclonal antibody directed against a cobra cardiotoxin, 723
Crystals of the protein insecticyanin from the tobacco hornworm *Manduca sexta L.*, preliminary characterization, 727
Crystals, single, of a winter flounder antifreeze polypeptide, 725

Sequence, nucleotide, of the *Paramecium primaurelia* G surface protein. A huge protein with a highly periodic structure, 47
Sequences, DNA, involved in recombination and resolution; site-specific and illegitimate recombination in the *oriV1* region of the F factor, 85
Sequences, palindromic, DNA, insertions into the J–F intercistronic region of bacteriophage ϕX174 interfere with normal phage growth, 285
Sequences, protein, topogenic, N-terminal; towards a comparative anatomy, 239
Sequences, untranslated, 5′ and 3′, control of Rous sarcoma virus RNA translation and packaging, 421
Sickle hemoglobin polymerization kinetics. Nucleation rates determined from stochastic fluctuations in polymerization progress curves, 553
Simian virus 40 minichromosomes, replicating, structure; the replicating fork, core histone segregation and terminal structures, 189
Site-directed mutagenesis, use in analysis of the ends of bacteriophage Mu, 597
Site-specific function of tRNA in eukaryote translation, effects of post-transcriptional base modifications, 663
Site-specific and illegitimate recombination in the *oriV1* region of the F factor. DNA sequences involved in recombination and resolution, 85
Site-specific recombination genes of lambdoid phage, structural and regulatory divergence, 603
Skeletal muscle, vertebrate, distribution of mass within native thick filaments, 167
Small nuclear ribonucleoproteins, U1, U5 and U4–U6, in HeLa cells, RNA–protein organization, 519
